

Work Sheets Cutting Designer Prints

Here is an easy trick for trimming away the white edge of your [Edible Image® Designer Prints™](#).

Use a pastry wheel cutter with the sharp edge. Cutters are available with one straight edge wheel and one zigzag edge wheel. These are wonderful for cutting the straight edge or adding an optional zigzag pattern to the edges of your Designer Prints™. This way, you can make sure your Designer Print™ is cut evenly (and straightly) on both sides.

Alternatively, you can use a ribbon insertion tool with the pointed blade or an X-Acto type razor knife to trim the ends. You will still need the razor knife for the last cut on the Designer Print™. After you have wrapped the cake and met the strip to the end of the last strip, cut the excess part of the strip while it is on the cake. It's best to make that last cut in an upward motion, so you have a clean even cut that does not pull the Designer Print™ away from the cake. Or, if you have a steady hand, you can just use scissors.
